

# The Lojer Capre MC/RC

The Lojer Capre chair range offers a unique, highest quality solution for recovery after day surgery, dialysis and cytostatic treatment, and general examinations. The versatile Capre chairs help bring an air of quality to any facility and improve the patients' comfort during treatment.

The control panel allows adjusting the chair's height, back section, seating angle and both leg sections, independently of one another. The head and leg sections also feature length adjustment. The chair features three preprogrammed positions (incl. beach chair and full trendelenburg position) as well as a memory space for the customers to program and store their own positions.

The Capre chair has an optional multifunction armrest that can be rotated 180 degrees with gas spring assisted angle adjustment and IV-pole attachment. For the foot section there are three options: motorised one-piece section or split leg sections with motors or gas springs. The patient's comfort is further enhanced by an anatomic dual coloured SKAI upholstery, an iPad stand with USB charger, a reading light as well as a coffee tray. If necessary, the chair can also be adjusted into a horizontal position.

*"Highest quality solution for recovery after day surgery, dialysis and cytostatic treatment, and general examinations."*
